Key Facts

- The senses of taste, hearing, smell, and sight are located in specific parts of the body, the sense of touch is found all over the body.
- Not all bodies are the same, they look different and sometimes people have organs or other body parts missing.
- The sense of smell affects our sense of taste.
- If you take senses away, the ones you are left with become stronger. For example, if you were in a dark room and couldn't see, you would be able to hear better.

Threshold Concepts

Animals	Living things that need to feed themselves from plants or other animals.
Growth and Life	The irreversible increase of an organism's size over a given period. The capacity for growth and functional activity.
Humans	A human being.
